Weather Graphing

Use a resource (ex: www.wunderground.com) to find the high and low temperatures from a city of your choice for five (5) consecutive days. Complete the data table below. On the back, create a **bar graph** that shows the change in temperature over those five days. *You will need one set of bars to show the high temperatures and a second set of bars to show the low temperatures.*

City:	Temperature (degrees Celsius)	
	High	Low
Day 1		
Day 2		
Day 3		
Day 4		
Day 5		

Describe what the graph shows in the space below.

Do the high and low temperatures follow the typical pattern of weather for the **climate** in your city? Why or why not?
(Hint: look up the average seasonal temperatures for your city.)
